

## Protecting Customer Privacy

Dealership-wide Solutions

U.S. and Canada

**Roll-Top Security Doors**  
for the ColorFile® Filing System

Promote a trust relationship with your customers by protecting their private data in your dealership.

### Privacy Matters

Avoid significant legal penalties and customer loss by implementing proper measures to comply with privacy legislation. As you respond to the challenge of maintaining safeguards that are appropriate for your dealership, you will want to consider the privacy needs of your customers and how to ensure compliance while protecting your bottom line. With Roll-Top Security Doors for the ColorFile Filing System, you can be confident that your customer information is secure. Choose from a variety of closure and locking solutions to keep your documents safe.

### Secure Filing

Keeping customer information secure when not in use is a top priority. Open-faced cabinetry located in unsecured high-traffic areas can be an easy target for information theft. From deal jackets containing signed financial contracts in the front office to payment information in the service department, keeping confidential information from non-authorized personnel can help save you from costly litigation fees.

## Roll-Top Security Doors for the ColorFile® Filing System

### Standard-Fit Tambour Security Doors

Attach a roll-top door onto each individual filing cabinet for a simple way to lock open-faced filing cabinetry when not in use.

- Easily added to existing Four-Post, Slant or Square Stack shelving.
- Only nine inches of additional space at the top of the cabinet is needed for the door housing.
- PVC tambour material is lightly textured for scratch and fingerprint resistance.
- Dual easy-grip aluminum handles and a built-in mid-grip handle make opening and closing your cabinets easy.
- Individual security doors can be secured with a single lock and key, so that one key fits multiple cabinets.
- Available in light gray, white, or charcoal.

### Custom-Fit Tambour Security Doors

Do you need your security door to span the width of several cabinets or encase your Track or Mobile System? A custom-fit tambour security door can fill these needs. Unlike standard-fit doors, custom-fit roll-top doors can be used to cover multiple cabinets up to 11 feet in width in a single span or attached side-by-side to cover your entire system. Custom-fit doors can also be constructed to fit teller windows, doorways, or specialty cabinets to provide the security you need.

- Easily added to existing Four Post, Slant, Square, Track, or Mobile shelving systems.
- Double-walled, insulated, aluminum slats.
- Available in clear, aluminum, white, or beige.

*ColorFile Security Doors are a simple solution to solve security issues- I just roll down a door that locks when leaving the office unattended. It's an easy, versatile filing system and gives me the satisfaction of knowing we have safeguarded our customer information. Plus, they make us more aware of our work area and serve as a constant reminder that we need to protect our customers.*

### Applying Safeguard Rules\*

Based on the Gramm-Leach-Bliley Act provisions, the FTC created the Standards for Safeguarding Customer Information Rule (the "Safeguarding Rule"), effective May 23, 2003. The Safeguards Rule includes requirements that dealers appoint personnel to oversee compliance, develop and document a compliance program, assess risks, select appropriate service-providers, and evaluate and respond to all these measures. For more information, visit [www.ftc.gov](http://www.ftc.gov).

\*Applies in the US only.
