Track and Carriage System
for the ColorFile® Filing System

Go mobile to transform your file room into a productive work center with the Reynolds Track and Carriage System, a double-depth shelving solution for the ColorFile Filing System.

An Easy Answer for More Filing Space

A lateral system is the most simplistic form of mobile, high density storage. A Track and Carriage system that is seven rows high with three cabinets in the back and two in the front will hold over 12,500 files, requiring only 18 square feet of space. Use the Track and Carriage System in conjunction with our Four-Post and Stackable Shelving solutions or convert your existing open-faced units.

First, stationary files are mounted to the wall. Then an additional row of files is placed on a carriage system in front of the wall-mounted files, and the two-rail track is completely secured to the floor. The front cabinets roll from side to side, allowing access to the cabinets behind them, and the tracks are low profile, permitting step-in, not step-up, access. Designed with anti-tip mechanisms, the system is stable and simple to expand or relocate.

Track and Carriage System for the ColorFile® Filing System

Safe, Sensible Shelving

ColorFile Track and Carriage Systems are stronger than other mobile systems because their frames are partially constructed of aluminum, which is ten times stronger by weight than steel. Plus, the system's unique design makes it safe and easy to use. Track and Carriage Systems have:

- Four wheels and two tracks to provide the utmost rolling stability.
- Flanged wheels on the front rail and flat wheels on the rear rail.
- Perfect track joints for smooth and silent movement.
- Strong, ladder-shaped frames made from 12 gauge steel and heavy gauge aluminum.
- Aluminum extrusions that support maximum weight loads of 1,100 pounds per carriage foot.
- L-shaped containments for cabinets to nest within the frames.
- Low-profile tracks that permit step-in access.
- Anti-tip devices connecting the top of the front cabinets to the rear stationary cabinets and preventing derailment in the carriage.

Filing that Fits Your Needs

Tailor your Track and Carriage System to work for your dealership. Quality carpeting is available for the deck of your system in a variety of colors to complement your space. Choose from green, maroon, blue, gray, or beige. Plus, an optional retracting shelf can be added to create a convenient work surface, and optional Roll-Top Doors keep customer and business information safe by enabling you to lock your open-faced filing cabinets when not in use.

With the ColorFile Track and Carriage System, you can maintain larger files in your current work space without relocating or totally reconstructing departments. And because the movable carriages can be placed in front of existing cabinets, you experience minimal disruption during installation.
